

data to visualise
↳ map variables to
aesthetic attributes

→ geometric objects - what you see

→ scales map values from data
to aesthetic space

→ faceting by subset the data
to show multiple plots

coordinate system, put data
on plane of graphic

Data must be a dataframe pulled
into the `ggplot()` object

Aesthetics #. How data are represented
visually.

- i.e. mapping
- which data on these
- which data on this

Also: color
size, shape,
transparency
