

Arrange (data, ~~with~~ column-to-
sort-key)

multiple inputs are
arranged from left to right

(Can use desc(column)
for descending)

Can do

desc(ruby), desc(year)

specified ~~for~~ first
order matters

table

5	'15
5	'14
5	'14
5	'13
4	'17
4	'16
4	'15

`select(movies_df, column_x, ...)`

`select(movies_df, c(r1:r10))`

we don't want to
certain columns

`select(movie_df, title : votes)`

all cols from title to votes

`contains("r")` the
the "r" in the
col name

`ends_with("r")`

`startswith("r")`

`starts_with("r[0-9]")`

r1, r2 ..., r9.
