

R Fundamental Visualization

3 main 'dialects'

base: with (air quality, plot
(Temp, Ozone))

lattice: can handle multivariate

xy plot (Ozone ~ Temp, airquality)

gg plot 2:

ggplot(airquality, aes(Temp, Ozone))
geom_point()

Ggplot2

- more elegant and compact code than with base graphics
- More aesthetically pleasing defaults than lattice
- ~~the~~ Very powerful for exploratory data analysis
- a set of functions that define the basic components of a plot
- Used to produce figures using coherent consistent system
- Easy to get started, plenty of power
