

Scatter plot

- To compare how two quantitative variables change
 - Continuous, quantitative bivariate data
 - relationships between two variables
-

Line graphs

- When quantitative values ~~change~~ change during a continuous period of time.
- Time series data (non-cyclical data)

Box plots

- allow for comparison of data ~~for comparison of~~ from different categories
- graphically depicting groups of numerical data through their statistics

Heat Maps

Shows a large quantity of cyclical data.

Can use color or greyscale

Cross tab plot

- similar to ~~total~~ heatmap
- ~~used~~ but uses area ~~instead~~ instead
